

RASHIDA QAIYUMI

AI Engineer Intern | Data Analyst | AI & Data Science Graduate
Rashida969qaiyumi@gmail.com | +91 93012 56800 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

AI and Data Science graduate (B.Tech, CGPA 8.5) who works across the AI engineering and data analytics stack, from building and automating AI-driven systems to cleaning data and shipping dashboards. Built AllySphere, an AI-driven engagement platform, end to end from schema design through production, and implemented a published PSO-based image enhancement pipeline in Python and OpenCV. Automated recurring workflows with n8n, supported AI-assisted data pipelines in Agile sprints, and optimized 20+ SQL queries for a clinical records system. Also mentored 30+ learners across Python, SQL, and core ML concepts. Comfortable moving between model-adjacent engineering, workflow automation, and traditional analytics.

PROFESSIONAL EXPERIENCE

Data Science Mentor | Vidhyapeeth Grow Your Skills, Bengaluru

Jun 2025 – Dec 2025

(Part-time, remote; run concurrently with the full-time internships below)

- Mentored 30+ learners through 15+ hands-on sessions covering Python, SQL, and core Machine Learning concepts, using structured case studies across retail, healthcare, and finance domains.
- Reviewed 30+ learner submissions, including EDA reports, dashboards, and machine learning projects, providing structured feedback that improved analytical accuracy, reporting quality, and project presentation.

AI & Analytics Intern | Ranazonai Technologies (Remote)

Aug 2025 – Nov 2025

- Built and maintained automated data pipelines using AI-assisted tooling, increasing stakeholder dashboard refresh frequency and reducing manual reporting effort.
- Analyzed user engagement and content-consumption metrics for MusabLaw, an e-learning platform, using Python and SQL to inform feature prioritization for the engineering team.
- Ran data quality checks and supported UAT cycles within Agile sprints, contributing to a shorter QA turnaround before releases.

IoT Data Analytics Intern | Sigmatronics Innovation Pvt. Ltd., Nagpur (On-site)

Jun 2025 – Aug 2025

- Contributed to a real-time analytics platform ingesting live IoT and GSM-module sensor telemetry for continuous operational monitoring across a live device network.
- Structured and analyzed telemetry data streams to support pattern detection and anomaly identification, producing visual summaries used in product performance reviews with stakeholders.

Data & Software Intern | Nass Technologies, Nagpur (On-site)

Feb 2024 – Apr 2024

- Built structured data pipelines for an AI-assisted pathology laboratory management system, supporting thousands of laboratory records while improving reporting accuracy and data accessibility.
- Developed and optimized 20+ SQL queries for laboratory record management, improving report generation efficiency and enabling faster retrieval of patient records and operational KPIs.

KEY PROJECTS

AllySphere - AI-Driven Alumni and Student Engagement Platform | Python · SQL · Firebase · n8n · REST APIs

- Designed and built a full engagement platform with structured schemas for user profiles, posts, and interactions, as the capstone Major Project.
- Automated recurring reporting and notification workflows using n8n, reducing manual follow-up work for platform administrators.
- Maintains structured, query-performant databases for user activity and content metadata at scale, with engagement analytics guiding feature decisions.

Underwater Image Color Enhancement using Particle Swarm Optimization | Python · OpenCV · NumPy · Matplotlib

- Implemented a published four-stage research pipeline (color-cast neutralization, dual-intensity image fusion, PSO-based mean equalization, and unsharp masking) using Python, OpenCV, and NumPy, tuning parameters with Particle Swarm Optimization.
- Reproduced a peer-reviewed enhancement technique end-to-end, meaningfully improving visibility, color accuracy, and edge sharpness on real underwater imagery.

Netflix Movies and TV Shows: Exploratory Data Analysis | Python · Pandas · Matplotlib · Seaborn

- Cleaned and explored the Netflix Movies and TV Shows dataset, analyzing content-type split, country-wise distribution, genre trends, ratings, and year-over-year growth.
- Identified that Movies significantly outnumber TV Shows, that content production accelerated sharply after 2015, and that the United States contributes the largest share of titles.

TECHNICAL SKILLS

AI & Automation: Scikit-learn, TensorFlow, Prompt Engineering, n8n Workflow Automation, REST APIs, ETL

Programming: Python, SQL

Databases: SQL Server, Firebase

Analytics & Visualization: Pandas, NumPy, EDA, Statistical Analysis, Data Cleaning, Power BI, Power Query, Dashboard Development

Microsoft Tools: Excel (Advanced), Power BI Copilot, MS Word, MS PowerPoint

EDUCATION

B.Tech, Artificial Intelligence and Data Science (CGPA: 8.5)

Graduated 2026

Anjuman College of Engineering and Technology (ACET), Nagpur

Scholarship: Infocepts Innovate Scholarship, 2026 - competitively selected nationwide for strength in data analytics and AI-driven problem solving.

Certifications: Data Analytics and Visualization (Accenture North America) · Machine Learning with Python (Coursera) · Introduction to Data Science (Infosys Springboard) · AWS Cloud Practitioner Essentials (AWS)

LEADERSHIP & EXTRACURRICULARS

Joint Secretary, Nexus Forum (AI & DS Branch), ACET (2023–2025) - organized workshops and hackathons for 50+ students; handled logistics and speaker outreach. Also competed in Bhashini Maha Challenge 1.0 (2025), a national NLP challenge on multilingual AI for Indian languages.
